Doctor's comments		*Referral medical institutions, etc. to persons requiring detailed examination			

For those who have undergone prostate cancer screening

Read the following explanations about prostate cancer screening results and Please use it for future cancer prevention, early detection and treatment.

★ Let's know the results of cancer screening.
Receive the explanation about examination result from medical institution where examination was carried out.

Which of the following was the "examination result"?

- ☐ Within the standard range (4.00 ng/ml or less) → Go to ①
- ☐ Detailed inspection required → Go to ②

① Those who are "within the reference range"

"The results of this checkup are within the standard range." However, It does not mean that you do not have to consult your family doctor regularly next 5 years until the next checkup. .

② Those who require a detailed inspection

"This checkup result exceeds the standard range."

Please undergo a detailed examination at a specialized medical institution (urology department).

→ Go to "How to receive a detailed inspection"

★ How to receive a detailed inspection

"Chiba City Prostate Cancer Detailed Examination Request Form" issued by a medical institution
and "Chiba City Prostate Cancer Screening Card (individual copy)" and "health insurance card"

Please bring it with you and have a medical examination.

* As a reference for where to go to see a doctor, please refer to the attached sheet "Information for Detailed Examination"

◎ For those who are taking a hair restorer to drink and some medicines for benign prostatic hyperplasia

The PSA level is lowered due to the action of hair restorers and drugs for treating benign prostatic hyperplasia
You may inform your doctor that you are taking internal medicine when you are going to have a PSA test at an organ department or family doctor. This will help you to get accurate test results.

Prostate cancer screening does not detect 100% of prostate cancers.
If you have subjective symptoms, please consult a medical institution immediately.

★ What is the Prostate?

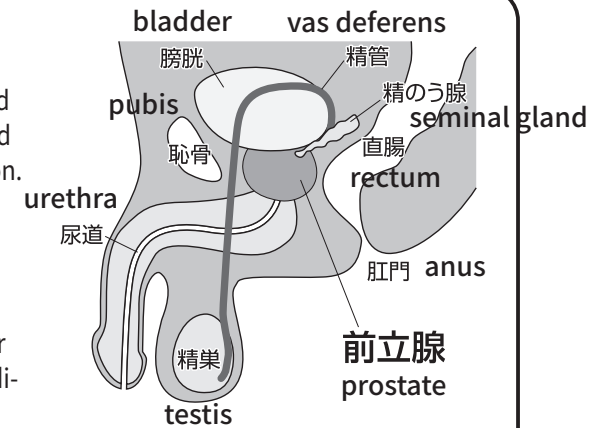

The prostate is a walnut-sized organ found only in men. It is located below the bladder and surrounds the urethra. It secretes prostatic fluid that helps sperm motility and controls urination. It secretes prostatic fluid and regulates urination.

★ What is prostate cancer?

Prostate cancer is most common in men over 50 years of age, and both mortality and morbidity are increasing. Early detection of prostate cancer by PSA (blood test) or other means can reduce the risk of death from the disease.

★ Subjective Symptoms

In the early stage, there are few subjective symptoms. If you already have subjective symptoms such as difficulty in urinating or frequent urination, you may be suffering from benign prostatic hyperplasia (BPH).
Please consult a urologist.

Health consultation

The Health Division of the Health and Welfare Center in each ward offers health consultations such as prevention of lifestyle-related diseases, as well as smoking cessation support.
(Individual consultation for those who want to quit smoking). In addition, please note that the Health Division may inform you about health-related lectures, etc.
For information on the Health Division, please see the "Information on cancer screening, etc."

Please note that the examination results may be aggregated and published. However, when publishing, only the aggregated figures will be published, and personal information such as names will not be published at all.
